

Squirrel Controller One-Way Door

When exclusion of squirrels in a structure is the preferred method of control, the use of one-way doors is a viable alternative to trapping. The Squirrel Controller one way door is mounted to the outside of the structure, eliminating the need for access to the spaces inside the structure. Designed for gray, red and flying squirrels, the Controller measures 10" L x 3.5" W x 3.5" H. Fully assembled and ready to use right out of the box. Contact Nixalite for details on live capture cage traps for squirrels.

Item# VCS53120 - Squirrel Controller One-Way Door

10" L x 3.5" W x 3.5" H

Squirrel Controller is a simple one-way door. It prevents grey, red and flying squirrels from using an opening for access into and out of a structure. The sprung one-way gate allows them to get out but not back in the same way. Use the mounting wings for fastening to the surface.

If you want to turn the Controller into a trap, Nixalite offers Controller Extensions that fasten over the open end of the controller. The extensions have closed ends and multiple holding areas to allow for multiple squirrel captures for each setting. Contact Nixalite for more information on the Controller Extensions.

IMPORTANT NOTE: Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science and you might not catch anything. Effective trapping takes careful planning, a knowledge of the target species, the correct bait, trap location and more.
