

Gel Repellent 4the Birds®

Non-drying sticky gel repellent used to discourage pigeons & starlings from buildings & structures.

4 The Birds is a transparent sticky gel used to discourage pigeons and starlings from landing on surfaces where they land and roost. This safe and easy-to-use polybutene gel is EPA registered for use as a repellent for pigeons and starlings.

4 the Birds is applied on bird resting places, such as window sills, roof ridges, gutters, parapets and ledges. It can deter birds for up to a year depending on the environment. Airborne contaminants and debris can cover the gel, reducing effectiveness. If completely coated, remove existing gel, clean the surface thoroughly and reapply.

Before Applying

- Clean the surfaces thoroughly. Remove dirt, droppings and other debris. Product must be applied to clean and dry surface.
- When cleaning surfaces, take the necessary steps to protect yourself against bird waste hazards.
- Treat porous and textured surfaces with an under-coating such as paint or sealer. See the product label for more details.
- 4 The Birds works in hot and cold temperatures. It retains its tack from 15° F. up to 200° F.
- 4 The Birds is labeled for use in repelling pigeons and starlings. Do not apply where desirable bird species are present.

Available in
10oz Cartridges

Application

The Birds is applied to clean and dry surfaces in beads. When applied as directed, each cartridge should apply 10 feet of repellent.

1. Cut the tip at a slight angle, leaving the lip on the spout so you can cap partially used containers.
2. Load the cartridge in a caulking gun and break the seal. When applying repellent, press against the surface to help ensure good adhesion.
3. Apply beads of repellent no larger than ½" wide by ½" high. DO NOT APPLY wider or larger beads. DO NOT COVER THE ENTIRE SURFACE.
4. For surfaces less than 4" wide, apply one bead of repellent 1" from the outside edge. For surfaces 4" and wider, apply one bead 1" from the outside edge and additional beads for every additional 2" in surface depth.
5. Leave a small gap in the bead of repellent every 1 to 2 feet to allow for water drainage.

Clean-Up

Use mineral spirits to remove product from treated surfaces, equipment or other materials.

ALWAYS READ THE PRODUCT LABEL BEFORE APPLICATION!!
