

# Medium Repeating Pigeon Trap

This trap has four one-way entry doors (two on opposite sides) and can hold up to 30 birds at one time. Built from 16 ga. galvanized wire with a 1" x 2" mesh this pigeon trap is designed to be economical, durable and easily placeable. A spring and latch fastened, top mounted access door ensures easy bird removal when unloading the trap. This single compartment trap comes fully assembled, ready to use. For trapping large flocks of pigeons, place multiple traps end-to-end.

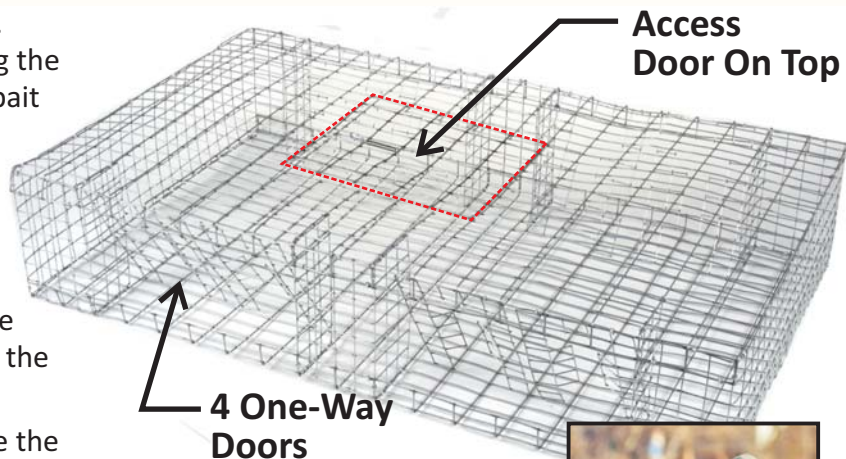

Position the trap as shown; down flat with the one-way doors facing out to clear approaches. For large flocks, place multiple traps end to end or randomly around problem area.

Pre-bait the area for several days. Make sure that pigeons are eating the bait before placing the trap. Pre-bait the trap by placing the trap over the pre-baited area and tie all of the one way doors open so pigeons can go in and feed but still get out. Once the pigeons are acclimated to the area and the trap, untie the doors and capture the pigeons.

Inspect traps every day to remove the trapped pigeons and to add bait & water as needed. If trapping in direct sunlight, create shade by partially or completely covering trap.

As long as they have water and food, you can leave a few pigeons in the trap as decoys. Do not leave birds in the trap for long periods of time.

**Item# NHPT 8"H x 24"W x 36"L**

**Access Door On Top**

**4 One-Way Doors**

*Single cavity, repeating pigeon trap can hold up to 30 birds at a time. Lightweight and ready to use.*

**IMPORTANT NOTE:** Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science. Nixalite of America Inc guarantees the workmanship of the bird traps. WE DO NOT guarantee that you will catch anything. Effective trapping takes careful planning, a knowledge of the target species, the correct bait, trap location and more.
