

# V-Top Starling/Sparrow Trap

## High Capacity, Live Capture, V-Top Starling & Sparrow Trap

When you need to trap large numbers of starlings and/or sparrows, this V-Top design is hard to beat. It goes together quickly and can be left in place to catch 100's of birds for each setting. It works by making it easy for starlings and sparrows to see the bait and get in through the V-Top funnel. It holds them in place because the birds can not fly back out through the funnel top. A hinged side door allows for quick bird removal.

Made from 1/4" diameter steel rods and heavy duty welded wire mesh, this trap is made to last. The whole trap assembles in about 20 minutes and can be broken down and moved to a new location quickly. Assembled the trap weighs 140 pounds but none of the prefabricated panels weighs more than 12 pounds.

Pre-bait the area for several days. Make sure that the birds are eating the bait before placing the trap. Position the trap as shown; on flat, level surfaces with easy access to the hinged side door. Inspect the traps EVERY DAY and remove the trapped birds as needed. You can leave the first few sparrows and/or starlings you get in the trap as decoys - they can help draw other birds into the trap. Keep water and food in the trap to keep birds comfortable. If the trap is in direct sunlight, create shade by covering a portion of the trap with cloth. DO NOT leave birds in the trap for long periods of time.

**IMPORTANT NOTE:** Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science. Nixalite of America Inc guarantees the workmanship of the bird traps. WE DO NOT guarantee that you will catch anything. Effective trapping takes careful planning, a knowledge of the target species, the correct bait, trap location and more.
