

Hole Trap For Sparrows

This trap is designed to be installed over any hole or gap that is used by sparrows to enter or exit a building or structure. As the birds leave the structure they fly through the hole and into the trap. The trap is built so the birds cannot get out the way they got in. This trap can hold about 10 sparrows at a time. After birds are trapped, remove the trap and cover or repair the hole or opening to prevent other birds from returning. NOTE: do not leave trap unattended for long periods of time.

Item# NHST 24"H x 10"W x 8"D

Install the trap so the 'sparrow door' is over the hole in the structure. Use screws, nails or 'U-staples' to hold the trap over the hole. Make sure that birds can not get around the trap. This trap can hold 6 to 10 sparrows at a time.

To keep trapped birds in good condition, make water and feed available in the bottom of the trap. Do not leave trap unattended for long periods of time.

After all the sparrows have been caught and released elsewhere, remove the trap. Seal up or cover the hole to prevent more birds getting into the structure.

IMPORTANT NOTE: Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science. Nixalite of America Inc guarantees the workmanship of the bird traps. WE DO NOT guarantee that you will catch anything. Effective trapping takes careful planning, a knowledge of the target species, the correct bait, trap location and more.
