

Pigeon Trap For Pitched Roofs

The most complete trap for pigeons can be used on pitched, uneven and flat surfaces. Built from heavy duty 14 ga. galvanized wire this pigeon trap has adjustable legs with plastic inserts that can be used on any roof surface including tile. Each trap has 6 one-way entry doors (on all sides), fold down landing platforms (on all sides), a heavy duty slide out galvanized flat pan, one feed pan, one 1-gallon water container and the hinged shade screen. Each trap holds 20 or more pigeons. This 2 compartment trap sets up in just a few minutes.

Item# SW3624 - Pigeon Trap for Pitched Roofs

Pre-bait the problem area for several days. Once birds are used to the location, place the trap in the pre-baited area. Pre-bait the trap by tying open the doors so birds can move freely in and out of the trap as they eat. Apply bait in a trail that starts outside of the trap, leads in through the doors and ends with the bulk of the bait in the middle of the trap.

After acclimating to the trap, untie the doors and capture the pigeons. Make sure to inspect the trap every day. Remove the pigeons by using either of the 2 top mounted access doors (under the shade screen). Use these doors to access the water and food containers.

Make sure the birds have food and water. Do not leave pigeons in the trap for long periods of time.

IMPORTANT NOTE: Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science. Nixalite of America Inc guarantees the workmanship of the bird traps. WE DO NOT guarantee that you will catch anything. Effective trapping takes careful planning, a knowledge of the target species, the correct bait, trap location and more.
