8.2. Exposure controls:

In case of a hazardous material with no controlled concentration limit it is the employer's duty to keep concentration levels down to a minimum achievable by existing scientific and technological means, where the hazardous substance poses no harm to workers.

8.2.1 Appropriate engineering controls:

In pursuance of work is proper foresight needed to avoid spilling onto clothes and floors and to avoid contact with eyes and skin.

Ensure adequate ventilation.

This can be achieved by local suction or general air extraction.

If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn.

8.2.2. Individual protection measures, such as personal protective equipment:

1. Eye/face protection: use appropriate tightly fitting protective glasses with side protection (EN 166).

2. Skin protection:

- a. Hand protection: use appropriate protective gloves (EN 374). Protective hand cream recommended. Final selection of glove material must be made taking the breakthrough times, permeation and degradation into account. The selection of the suitable gloves does not only depend on the material, but also on other quality characteristics and varies from manufacturer to manufacturer. For preparations the resistance of glove materials can not be predicted and must therefore be checked before use. The exact breakthrough time of the glove material can be requested from the protective glove manufacturer and must be observed. Recommended material: rubber.
- b. Other: use appropriate protective clothes (for example safety shoes EN 344, long sleeved clothing).

3. Respiratory protection: normally not necessary.

4. Thermal hazard: none known.

8.2.3. Environmental exposure controls:

No specific prescription.

**The requirements detailed in Section 8 assume skilled work under normal conditions and usage of the product for appropriate aims. If conditions differ from normal or work is carried out under extreme conditions an expert's advice should be sought out before deciding upon further protective measures.**
