

Repel Flying Birds Indoors and Outdoors With The Bird Barricade™ ULV Fogger

A Compact and Versatile ULV Fogging System That is Perfect for Dispersing Fog Force Bird Fogging Repellent.

The Bird Barricade™

An easy-to-use, automatic, ultra-low volume (ULV) electric fogger that disperses both water and oil based solutions, indoors and outdoors, without wetting surfaces or wasting product. It is ideal for the application of Fog Force Bird Fogging Repellent.

Bird Barricade + Fog Force

A Bird Barricade and Fog Force combo can protect your property from flying pest birds. Fog Force repels flying birds in open spaces where other methods of control would be difficult to use. Call Nixalite for more detailed information on Fog Force Bird Repellent.

Why Bird Barricade is Better

The Bird Barricade offers big machine automation features in a compact and portable unit. It is nearly self-contained, requiring only power (115 VAC) and the fogging solution. Everything else is either built-in or provided.

No More Tank Refills

No need to refill a solution tank! The built-in pump/compressor draws solution through the included siphon hose which is inserted directly into the solution container. Draw oil or water solutions from 1 gal jugs up to 55 gal drums for extended applications.

Automated Fogging

An easy-to-use on/off timer allows for unattended, automated fogging. Set the timers to cycle the fogger on and off all day long. This fogger is rated for 15,000 hours of continuous operation.

Flow Control

A flow control adjustment dial allows the operator to quickly adjust the output from a thick fog to a light, nearly invisible haze.

Applications

The Bird Barricade Electric Fogger can be used to disperse oil and water fogging agents of all kinds.

- Bird dispersal with Fog Force
- Crawling & flying pest control
- Surface disinfection & sanitizing
- Odor & smoke abatement
- Mold & mildew abatement
- Greenhouse & nursery fogging
- Humidify storage & work spaces
- Any application that requires a ULV application of an oil or water based solution.

For technical specifications see the back of this page. If you have any questions about The Bird Barricade, please contact Nixalite of America Inc.

The Bird Barricade™

- Quiet & easy-to-use
- Compact: 7"x16"x11"
- Indoor & outdoor
- 115vac electric
- Oil & water solutions
- Ideal for Fog Force
- No solution tank to fill
- Draws directly from solution container
- Automatic operation with built in timer
- Easy flow adjustment
- Flows 0.1 to 0.5 gph for non-wetting fog
- Additional options available, call for info

Nixalite offers a full line of fogging equipment. Call us for more information.

Bird Barricade™ Coverage

Different solutions will have different coverage rates. The rates shown are for the Fog Force Bird Repellent.

INDOORS - one unit can fog an open area about 100ft wide, 200ft long and 20ft high. If the area is obstructed (storage, equipment, machines, etc) add low speed fans to help with air circulation.

OUTDOORS - one unit can fog up to 1 acre of open area (in low wind conditions). Coverage will be less in obstructed areas or in high wind areas.

Fogger Placement

Always position the fogger and the fogging solution on a flat, level surface. Try to keep the fogger and solution off of the ground. Make sure the fogging nozzle points toward the area to be fogged.

If drawing from plastic jugs, tie them to the fogger's carrying handle. This will help prevent the containers from tipping over or blowing away when solution levels gets low.

If drawing the fogging solution from a large drum, secure the drum to a wall or to the floor so it can not be

easily knocked over. Then secure the fogger to the top of the drum.

For outdoor placement, take advantage of prevailing wind and air currents. Place the fogger so the wind will help deliver the fog to the desired locations. Do not fog in high wind situations.

Use **Windicator Haze** to help visualize air currents and find the best location for the Bird Barricade fogger.

What You Will Need

A flat, level surface, an electrical outlet (115vac), the fogging solution and a small Phillips screwdriver to set the built in timer.

Siphon Hose

Each Bird Barricade comes with a siphon hose to draw fogging liquid directly from the fogging liquid container. Following the guidelines provided with the fogger, attach one end of the siphon hose to the fogger. Put the suction end of the hose in the fogging solution jug.

If purchased to apply Fog Force Bird Repellent, the Bird Barricade will come with an extra plastic cap that fits the Fog Force jugs. Pass the

siphon hose through the hole in the cap and then connect to the fogger. Place the suction end of the hose inside the Fog Force jug and screw on cap. Tie the jug to the fogger's carrying handle to stop it from tipping over or blowing away when the solution gets low.

Test Run & Calibrate

In an open space, test run the fogger to make sure everything is working properly. Use water for the test. Turn the solution flow valve to adjust the fog output.

Bird Barricade Specifications

Weight: 23 lbs / 10.4kg

Size: 15.5"L, 7.1" W, 10.5" H
(39.3cm x 18cm x 26.6cm)

Case: Powder coated aluminum case, carrying handle and rubber feet.

Power: 115 vac - 60hz
Rated for 15,000 hours of continuous operation.
4ft grounded power cord

Nozzle: 0.1 to 0.5 gallons per hour at max pressure of 100psi

Limited Warranty - one year limited warranty on Bird Barricade foggers.
