

Mole Out

Mole Repellent Granules

Safe, effective, biodegradable and easy to use.

A granular repellent that repels moles and inhibits the formation of mole tunnels and holes. Reduces mole damage to turf and landscaping.

Sprinkle It

Mole Out contains all-natural and biodegradable ingredients. Unaffected by rain, an application can remain effective for up to 3 months when applied as directed. Use Mole Out to repel moles from lawns, gardens, golf courses, nurseries, parks, athletic fields and other recreational turf areas.

Mole tunnels disfigure turf areas and expose the roots of delicate plants to air, causing them to wilt or die. Mole tunnels and burrows can be walking and tripping hazards, as well as a problem for lawn care equipment.

Mole Out coats the moles food source, causing the mole to experience stomach disruptions. The purpose is to get the mole to associate the stomach disruptions with food items in the treated areas. **It can take up to 3 weeks for Mole Out to reach maximum effectiveness.**

Pour It

Initial Application: At five foot intervals, open one inch holes in a mole tunnel. Apply 1 tablespoon of Mole Out into the tunnel at each location, then cover the holes with soil. After this is done, apply Mole Out granules at a rate of 1 pound per 500 square feet over the entire area. Water until the soil is saturated.

Mole Out mole can be applied with its sprinkle top lid (5 pound container) or with a fertilizer spreader. If using a spreader, apply Mole Out granules at a rate of 1 pound for every 500 square feet. See the product container for spreader make and model settings.

Coverage:

- One 5 pound container can treat up to 2,500 square feet
- One 25 pound container can treat up to 12,500 square feet

Take these steps to increase your success:

- Treat area with a grubicide as well as the Mole Out repellent
- Use the Whole Control liquid repellent with the Mole Out repellent

Repel It

Note: ALWAYS read all product information and the product label before application!!
