

# Medium Single Door Animal Trap

Designed for the live capture of squirrel sized animals including squirrels, muskrats, rabbits, etc. Designed to be durable and portable with 3/16" solid steel rod framework and heavy duty 16 gage 1x1 wire mesh. This trap comes fully assembled trap ready to use right out of the box. The trap measures 24" x 8" x 8". All trap linkage is inside the trap so animals can not trigger the pan from outside. The extra large pan trips to the rear for proper bait placement.

## *Item# NHSQT - Single Door Live Capture Animal Trap*

Pre-bait the problem area for several days without the trap. Once animals eat the bait and are used to the location, place the trap in the pre-baited area.

Pre-bait the trap by tying open the one way doors so animals can move freely in and out of the trap as they eat. Place the bait at the rear of the trap so the animals must fully enter the trap.

After acclimating to the trap, untie the doors and capture the animal. Make sure to inspect the trap every day. To release the animal, set the trap down flat and pull the trap door upwards past the locking stub at the front of the trap.

Use caution when removing the trapped animal. They are likely under stress and can bite and scratch when being removed.

**IMPORTANT NOTE:** Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science and you might not catch anything. Effective trapping takes careful planning, a knowledge of the target species, the correct bait, trap location and more.
