1. Drive Ground Sleeve

Do not hammer directly on the Ground Sleeve! This will damage the sleeve, preventing the posts from fitting properly. Use the HD Sleeve Driver to drive the sleeve into the ground. Use a bubble level to make sure the sleeve is driven straight into the ground. The top of the installed sleeve should be just above ground level. In hard or rocky soil, make a pilot hole first. This eases installation and prevents damage to the sleeve. Make sure pilot hole is plumb.

2. Set Posts

Slide the Premium Post into the sleeve. The post will stop at the notches inside the sleeve. Installed height will be 8ft above grade. Repeat at each post location.

Sleeve allows for quick post removal. Cap the ground sleeve when the post is removed. This prevents the sleeve from filling up with debris.

**Recommended Items:**

DF-RP9, DF-GS, DF-GSD and fence hardware accessories.

**Acceptable Material:**

Premium Posts: black, 9ft x 1-5/8" dia steel fence post with included rain cap.

Ground Sleeve: HD, thick wall galvanized steel ground sleeve for posts.

HD driver: HD steel plug for driving sleeves.
