

Live Capture Small Animal Traps

Small Animal Front Release Trap

#TH102XL Small Animal, Front Release Live Trap is designed for chipmunks, small squirrels, rats, gophers and similar small animals. It weighs 2 pounds, measures 18"L x 5"W x 5"H and is made of 1/2" x 1" - 16 gauge galvanized wire mesh. These traps are made in the USA, built to last for years, quality inspected and easy to set and use. Years of experience and common sense went into the construction of these durable and economical wire mesh traps. Nixalite offers a variety of traps for the most common pest species.

#TH102XL - Live Capture Small Animal Trap

18"L x 5"W x 5"H
1/2" x 1" - 16 ga. wire
Fully Assembled, Ready To Use

Basic Trapping Guidelines

Before you place the trap, pre-bait the area for several days. Once animals are drawn to the bait, place the trap at the pre-bait location. Place the bait on top of or next to the trap until the animals are accustomed to the presence of the trap. After that, move the bait inside the trap as far from the access door as possible (so the animals have to

fully enter the trap to get the bait). Tie or block open the trap door so the animals can get into and out of the trap. After the animals are accustomed to going inside the trap, untie or unblock the trap door so the next time the animal enters, it cannot get back out. Inspect the trap every day. Be cautious when removing trapped animals.

IMPORTANT NOTE: Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science and you might not catch anything. Effective trapping takes planning, knowledge of the target species, the correct bait, trap location and more.
