

Live Capture Repeating Wildlife Traps

Repeating Small Animal Trap

#THM30H Repeating Small Animal Trap is a double door repeating catch trap. It is designed to hold up to 10 small animals at one time including small squirrels, chipmunks, gophers, and rats. The push-through one way doors make it easy for animals to get in but tough to get back out. Each trap has 2 spring powered 3" wide double doors and a large 5" square release door. It weighs 6 pounds and is 24"L x 24"W x 4"H. It is made of 1/2 x 1 - 14 gauge galvanized steel wire. It is strong, reliable, and low to no maintenance.

#THM30H - Repeating Small Animal Trap

24"L x 24"W x 4"H
1/2" x 1" - 14 ga. wire
Fully Assembled, Ready To Use

Basic Trapping Guidelines

Before you place the trap, pre-bait the area for several days. Once animals are drawn to the bait, place the trap at the pre-bait location. Place the bait on top of or next to the trap until the animals are accustomed to the presence of the trap. After that, move the bait inside the trap as far from the access doors as possible (so the animals have to

fully enter the trap to get the bait). Tie open at least one of the access doors so the animals can get out of the trap. After the animals are accustomed to going inside the trap, untie the door or doors so the next time the animal enters, it cannot get back out. Inspect the trap every day. Carefully remove animals through the top access door.

IMPORTANT NOTE: Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science and you might not catch anything. Effective trapping takes planning, knowledge of the target species, the correct bait, trap location and more.
