

Standard Front Release Animal Trap

Economical box trap design for the live capture and easy release of raccoon sized animals including raccoons, groundhogs, skunks, nutria and more. Designed to be durable, easy to use and versatile. Built tough with 14 gage GALFAN wire mesh, this trap measures 36" L x 11" W x 12" H. Each standard front release trap uses a heavy-duty reinforced spring-loaded front trap door, to provide maximum performance and superior animal retention. Fully assembled trap is ready to use out of the box.

Item# VCS51700 - Standard Front Release Live Capture Animal Trap

Proper bait selection, trap location and knowing your target animal are important. For trap instructions and tips refer to the instruction booklet sent with the trap.

Do not handle the trap with your bare hands, this can leave a scent that animals can detect. The trap should be on a level surface so it does not tip or rock back and forth with movement. Place the bait at the very back of the trap in a small container or tray. DO NOT

put bait on the trip pan - it must be placed at the back of the trap. This will help ensure that the animal steps on the trip pan, triggering the trap door behind them.

Check the trap frequently. Do not leave animals in traps for extended periods of time. To release the animal, stand behind the trap and pull up on the front trap door. Always use caution when releasing the animal. They may be aggressive when released.

IMPORTANT NOTE: Having the best trapping equipment does not guarantee trapping success. Bird and animal trapping can be as much art as it is science and you might not catch anything. Effective trapping takes careful planning, a knowledge of the target species, the correct bait, trap location and more.
