

Bird Scare Predator Eye

What Are Predator Eyes?

Bird Scare Predator Eyes are an easy to install, visual bird deterrent that creates a predatory presence with staring "eyes", movement and bright colors. They are an economical method for spot control of nuisance birds.

Bird Scare Predator Eyes can be hung from any overhanging structure or from Nixalite's Predator Eye Mounting Bracket. Use them for bird problems inside as well as out.

Recommendations

For best results, vary the positions, colors and string length of the Bird Scare Predator Eyes every two to four weeks. Make sure the Predator Eyes have room for free movement (except in high wind applications). This helps prevent predictability, which birds will come to recognize.

For inside use, hang the Predator Eyes high enough to clear obstacles, yet low enough to be seen by birds flying towards the doorway or opening.

For fields, elevate the Predator Eyes high enough so they are clearly visible to approaching birds. The number of "eyes" required per acre will vary with each application. You may need to change colors, locations and display heights or add more Predator Eyes until the desired control is achieved.

In high wind areas, hang the Bird Scare Predator Eye from the top loop as normal. Tie an additional line to the bottom loop (where tail attaches) and secure to a structure or surface below.

Instructions:

1. Inflate the Predator Eye with air. **Do not** over inflate or use helium.
2. Peel the shiny eye spot decals off the supplied decal sheet and apply to the center of the "eyes". Attach the streamer tail to the air valve at the bottom of the Bird Scare Predator Eye.
3. To hang, use a weather resistant string or line (not supplied) and tie it to the top loop of the Bird Scare Predator Eye (opposite of air valve). If the Mounting Bracket is used, tie the other end of the line to the hole provided at the end of the bracket. If not, tie the line to any structure above to provide maximum movement and visibility.
4. The number of Bird Scare Predator Eyes required will vary with each application. It may be necessary to add more "eyes" to the ones already installed. Continue to swap positions, colors and display heights until the effectiveness is satisfactory.

Mounting Bracket

A heavy-duty aluminum mounting bracket is available to make mounting the Bird Scare Predator Eye easy. The 24" long bracket can be fastened to most surfaces with the supplied mounting screws. The bracket provides room for free movement of the Predator Eye.
